

Using TypeScript

In this lesson, we will be going over how we will use TypeScript in order to start learning. Let's begin!

We will be using code playgrounds and snippets on the Educative platform with all our coding environments already set up.

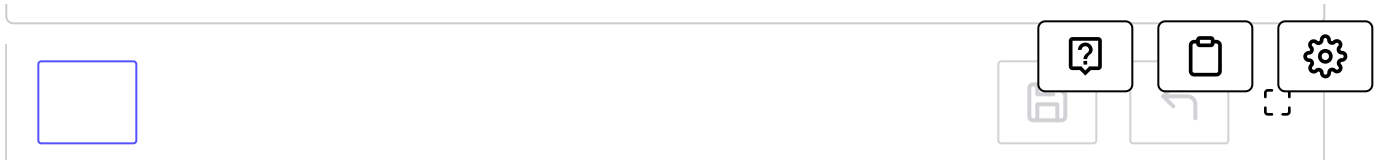

The really cool thing about learning on Educative is that you need not go through the hassle of setting up your learning environment and start learning and coding right away!

In this course, we will provide you with code snippets, coding playgrounds, and examples to make learning more interactive and worthwhile.

 hello.ts

```
var greet: string = "Greetings! ";  
var welcome_message: string = "Welcome to Educative";  
console.log(greet + welcome_message);
```

In case you want to learn how to set up your TypeScript project locally, please follow the instructions provided in the **Appendix** lesson of this course.
